

## «State of the art» Interior office signs for commercial buildings

**multitech**  
digital signage solutions

### Starting position

Commercial building with approx. 70 tenants. The building has 2 entrances. Both lead to the elevators in the centre of the building on the ground floor. The rental space extends over 6 floors (ground floor and floor 1-5).

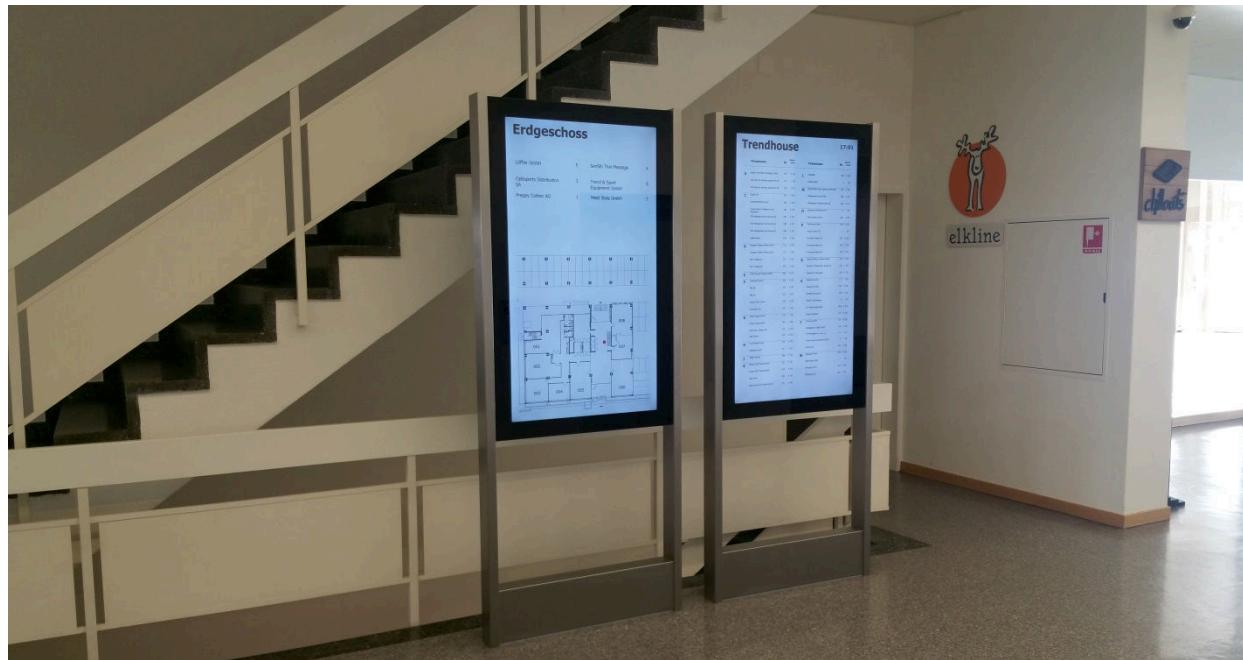

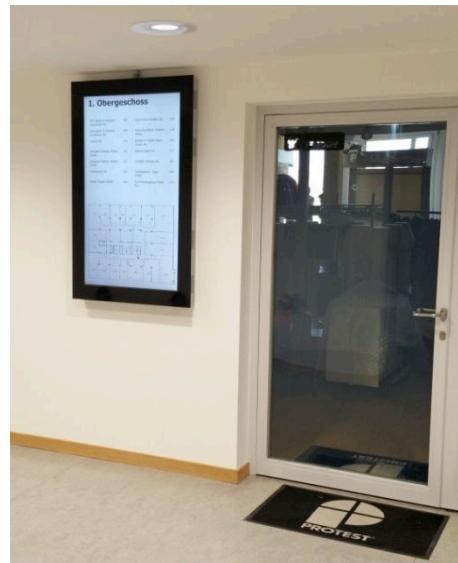

### Approach

On the ground floor, visitors are to receive an overview of all companies with an indication of the floor and room number. On each floor the represented companies are to be listed. In addition, a plan is to guide the way to the individual locations.

### Solution

Electronic Information System H-Type from multitech in sizes 55 "and 49". Software LCE-3 with remote access. The devices are protected with a hardened glass and a metal or stainless steel frame. The brightness of the screens is adapted to the circumstances. The programming is carried out by the contractor (as a service) or by the property management company. If desired, the logos of the tenants can be displayed. Optionally, the tenants can also welcome their visitors personally via a login to the software on the monitors.
